

Bird Census at Lake Claremont

13 January 2025

Note from the census taker:

The morning the bird census was conducted at Lake Claremont was warm and sunny.

The lake is drying fast. There is shallow water in the southern section, but the northern area is already dry. The water gauge shows about 1m AHD (see below photo). The bushland is very dry.

We observed 348 individuals of 32 species. The number of individuals is well below average, but the species recorded was slightly higher than our summer average.

Worth noting was our sighting of a single Crested Pigeon. This is the first time we have seen this species in our surveys and there are only two previous records on Birdata.

We were delighted to see a juvenile Cuckoo-shrike being fed by a parent. This is our first breeding record for the lake. We also saw a family of five Southern Boobook owls.

The below spreadsheet also shows the average numbers recorded in our previous twenty-three spring surveys.
